

Overview

This dashboard analyzes YouTube episode performance and audience sentiment for a popular hungarian channel.

Data Sources

fact_jolvanez_episodes — episode-level metrics

fact_jolvanez_comments —raw comment-level data

fact_youtube_daily_age_mix — daily age mix metrics

mart_episode_sentiment_summary — sentiment reporting layer

Pipeline

YouTube API → BigQuery → Cloud Run → Cloud Run Job → Scheduled Queries → Looker Studio

Core Metrics

Net Sentiment % = Positive % – Negative %

Engagement Rate = (Likes + Comments) / Views

Refresh Logic

The pipeline runs daily through automated ingestion, sentiment scoring, merge, and mart refresh steps.

Sentiment Logic

Each comment is classified as positive, neutral, or negative using the multilingual transformer model.
